NEW INSIGHTS FROM OLD PROGRAMS

THE STRUCTURE OF THE FIRST ALGOL 60 SYSTEM

WITH A FOREWORD BY DONALD E. KNUTH

New Insights from Old Programs — The Structure of The First ALGOL 60 System

Gauthier van den Hove

It is a commonplace that computer programming is hard, especially when one aims at creating a program that is correct. What kind of methods should be used to reach that goal is the subject of heated debates. Our thesis is a contribution to these discussions: To understand what computer programming is, and how it should be done, we propose to study how it is actually done — that is, to induce elements of method from factual observation. Our thesis takes the form of a detailed analysis, based on a careful reconstruction, of a particular well-crafted computer program: the first ALGOL 60 system, designed and implemented at the Mathematical Center (now CWI) by E. W. Dijkstra and J. A. Zonneveld, with the assistance of S. J. Christen and M. J. H. Römgens, on an Electrologica X1 computer. It is divided into three main chapters. Chapter I presents the two elements of the problem the Mathematical Center team was facing, namely the ALGOL 60 language and the X1 computer. Chapter II discusses the principles of its solution, explains the implementation choices made by the Mathematical Center team, and compares them to other possible choices. Chapter III presents the details of the Mathematical Center ALGOL 60 system, on an ISO C version of that system, reverse engineered from its X1 assembler source. This program is about 3000 lines long, and is composed of 173 subroutines working on 57 global variables. Finally, our conclusion, in the form of 17 theses and 4 hypotheses, indicates some lessons, in particular on computer programming methods, that we believe can be drawn from the analysis of that particular computer program.

NEW INSIGHTS FROM OLD PROGRAMS

THE STRUCTURE OF THE FIRST ALGOL 60 SYSTEM

ACADEMISCH PROEFSCHRIFT

TER VERKRIJGING VAN DE GRAAD VAN DOCTOR AAN
DE UNIVERSITEIT VAN AMSTERDAM OP GEZAG VAN DE
RECTOR MAGNIFICUS PROF. DR. IR. K. I. J. MAEX
TEN OVERSTAAN VAN EEN DOOR HET COLLEGE VOOR
PROMOTIES INGESTELDE COMMISSIE, IN HET OPEN-
BAAR TE VERDEDIGEN IN DE AULA DER UNIVERSITEIT
OP VRIJDAG 15 FEBRUARI 2019, TE 13:00 UUR

DOOR

GAUTHIER MARIE CLAUDE
JEAN THÉRÈSE GÉRALD
VAN DEN HOVE D'ERTSENRYCK
GEBOREN TE ETTERBEEK, BELGIË

Promotiecommissie:

Promotores: prof. dr. P. Klint, Universiteit van Amsterdam

prof. dr. T. van der Storm, Rijksuniversiteit Groningen

Overige leden: prof. dr. K. R. Apt, Universiteit van Amsterdam

prof. dr. J. A. Bergstra, Universiteit van Amsterdam

prof. dr. D. J. N. van Eijck, Universiteit van Amsterdam

prof. dr. C. B. Jones, University of Newcastle upon Tyne

prof. dr. F. E. J. Kruseman Aretz, Technische Universiteit Eindhoven

prof. dr. ir. C. T. A. M. de Laat, Universiteit van Amsterdam

prof. dr. B. Randell, University of Newcastle upon Tyne

Faculteit der Natuurwetenschappen, Wiskunde en Informatica

See <http://www.fibonacci.org/GHE3> for current information about this work.

This work is complemented by an electronic companion archive. It contains all the programs discussed, and a large number of additional programs collected from the literature (see Appendix G, pp. 355 sq.).

This research was funded by the Nederlandse Organisatie voor Wetenschappelijk Onderzoek Free Competition Grant number 612.001.003, and was carried out at the Centrum Wiskunde & Informatica.
