# a tool for the planners of tomorrow

These are the builders of tomorrow.
Eighteen, nineteen and twenty year olds, who can
not only talk intelligently about computers but use
them constructively. It is for people like these
that the University of Edinburgh has ordered a
System 4-75 computer for the Edinburgh Regional
Computing Centre. This advanced multi-access
computer, costing three quarters of a million pounds,
will be accepted by these people more with
eagerness than with awe. For to them the
computer, no matter how big, no matter how costly,
can be only a tool to help them shape the future.
System 4 is part of everyone's future.
