Subj: apm pictures

I have finished clearing out the v_pic directory.
the trash can is left of the chair
To view the pictures in their current form (uncompacted) you can use
vision:display -x128 chair.1
etc (the 128 is the height and width of the image)
To run display you need to load the LIBC stuff. running gjb:login.com
should do that.

Gavin.
